BARD FUSION™-TEC WALL-MOUNT™ Free Cooling Economizer and Air Conditioner

A game-changer for the Telecom Industry, this innovative equipment has been designed specifically to optimize free cooling opportunities. By implementing a reverse-airflow design, productive outdoor air for free cooling is brought into the system from the lower portion of the chassis. The heat in the shelter is exhausted out of the top of the chassis which completely eliminates any possibility of recirculating hot exhaust into the cool air entryway. When outdoor air is not productive for free cooling, the FUSION-TEC system has a fully flexible mechanical cooling operation that operates at an IPLV of up to 17.0, and also satisfies the D.O.E.'s 11.0 EER efficiency requirements.

Two system sizes available:

- HR36 Series 12.5 EER 2 to 3 Ton
- HR58 Series 11.0 EER 3.5 to 5 Ton

We have knowledgeable staff throughout our footprint trained specifically in this product. Contact one of them today for more information and for training opportunities.
